Software Engineer, Frontend & AI Interfaces | kishn0109.github.io/portfolio-v2

SUMMARY

Frontend Software Engineer with 4+ years in **React and TypeScript**, building real-time AI interfaces, design systems and data-heavy dashboards for 30,000+ seller stores; delivered dayparting that saved **$1M+ in ad spend** and mentors engineers.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, HTML, CSS, SQL
Frontend: React, Next.js, Redux, RTK Query, React Query, Zustand, Vite, Module Federation, Tauri
UI & Data Viz: Tailwind CSS, Radix UI, Storybook, AG Grid, Recharts, Leaflet, Design Systems, Accessibility
Real-time, Testing & Tooling: WebSockets, Web Workers, Node.js, Playwright, Jest, Vitest, GitHub Actions, PostHog
AI & LLM: Claude Code, MCP, Streaming LLM UI, Generative UI (A2UI), Multi-agent Orchestration

WORK EXPERIENCE

Software Engineer
January 2025 - Present
SellerGeni — *Bangalore, India*

- Architected SellerGeni's **agentic AI workspace** in **React, TypeScript and Vite**, streaming multi-agent runs live to 3,500+ active seller stores at **18K+ LLM calls/day** while holding p75 interaction latency at 144 ms.
- Built a **model-driven UI layer** that renders output from 45+ agent tools as interactive charts, tables and campaign plans, with before/after approval cards gating every AI-driven change across 10,000+ campaigns.
- Engineered server-side **AG Grid** tables in React for 7 ad entities spanning **78M+ rows**, with saved filter, sort and pivot views, cursor pagination and bulk edits that scaled from 500 to 10K rows per action.
- Delivered the **dayparting platform** end to end, letting sellers schedule 10,000+ campaigns by hour and day through a 24x7 drag-to-select heatmap with live budget previews, saving **$1M+ in ad spend**.
- Built a **70+ component design system** with tokens, accessibility guidelines and Storybook docs, shared across 3 product apps through **Vite Module Federation**, and led the migration of legacy JavaScript to TypeScript.
- Adopted AI-assisted testing with **Claude Code** and **Playwright MCP**, using parallel agents to generate, run and fix **150+ end-to-end tests** across onboarding, campaign and agent flows, raising test coverage by 40%.

Associate Software Engineer
May 2022 - December 2024
Codemonk — *Bangalore, India*

- Shipped **VAYDYN**, an AI drone ground-control desktop app, from concept to production in **React, TypeScript, Tauri and Rust**, with failsafe actions that cut mission error and failure risk by 25%.
- Raised the real-time telemetry dashboard from **15 to 60 fps** while rendering 50+ MAVLink updates/sec over **WebSockets**, by batching renders, memoizing panels and moving parsing to Web Workers.
- Built **offline mission maps** with Leaflet and local tile caching, letting operators plan, upload and fly drone missions at remote sites with no internet connectivity.
- Led frontend development of AIRO's **e-commerce platform** in **Next.js, Redux and RTK Query**, integrating an AI-powered product recommendation engine, an admin portal and a Ghost CMS blog.
- Re-architected the Codemonk and Handpicked websites on **Next.js** with SSG and SSR, reaching **0.27s LCP** and a fully responsive experience for 10K+ monthly visitors.
- Built **Rhythm UI**, an accessible React, Tailwind and Storybook component library adopted across **5+ apps** by 10+ engineers, with a config generator that cut project setup time by 50%.

OPEN SOURCE

- Merged 3 pull requests into **Rocket.Chat** (#32574, #29379, #29238) fixing markdown and Omnichannel UI bugs.

EDUCATION

Ambedkar Institute of Technology
August 2019 - May 2022
Diploma in Digital Electronics — *Delhi, India*
